CAPTRON Product Overview

CAPACITIVE SENSORS

[Fully electronic switches with touch sensor technology.](#)

CAPTRON offers a wide range of capacitive SENSORswitches for various industries and applications where unconditional reliability, durability, comfort and design are required.

In addition to a wear-free and maintenance-free electronics, the SENSORswitches have a very robust and vandal-proof design. Their 100% water-and oil-proof construction will resist even the most adverse environmental influences as well as industrial effects such as dirt, dust and chemicals.

Featuring: [CANEO series](#)

[CAPTRON optical laser sensors](#) allow you to detect metallic and non-metallic objects with precision. The wide range of designs and sizes are specially adapted for automation, robotics, and assembly.

CAPTRON [TCP \(Tool Center Point\) series](#) measure, calibrate and correct the X-, Y- and Z-axes in industrial automation applications worldwide, such as in dispensing technology, bonding technology, welding technology, soldering, and the food industry.

We've also partnered with Universal Robots to provide [URCap Software](#) to integrate TCP hardware with your robotics applications.

OPTICAL SENSORS

LEVEL SENSORS

CAPTRON is an experienced measuring technology manufacturer for the industry and the market leader in fill level measurement in the field of dispensing technology. Capacitive CAPTRON probes accurately and reliable measure the fill levels of liquids, bulky goods, pastes, adhesives and chemically aggressive materials.

There are two systems to choose from: Compact probes, in which the electronics and probe form a single unit, and probes with external amplifiers that are suitable for applications with high temperatures and pressures.

[Learn more here.](#)

[Safe operation of machines and systems](#)

The capacitive "safeCAP" two-hand control allows heavy machinery and systems in automated production plants, such as presses and punches, to be controlled safely and without pressure.

To start the machine the operator simultaneously presses two capacitive buttons which are connected to a safety relay. Incorrect or inattentive control using just one hand or with another part of the body is detected by the system and the machine is not started.

The fully electronic design of the SENSORswitches is specially designed for everyday fatigue-free continuous use and features extreme durability, reliability and robustness. The user receives optical feedback through LEDs.

TWO-HAND CONTROL SAFECAP

PICK-BY-LIGHT

[Quick and easy picking with pick-by-light](#)

Maximized order picking performance is reflected in shorter throughput times, lower error rates, and improved delivery capability through process transparency.

Featuring: [ISAC - the world's first mobile pick-by-light system](#)! Unlike traditional pick-by-light systems, ISAC eliminates the need for time-consuming and costly hardware installations with extensive wiring. Our complete solution consisting of picking trolley with laser spotlight, computer vision and oneGRID pick-by-light software can be rented as an option and is ready for immediate use in just a few steps.
