CAPTRON stop request buttons are specifically developed for the demands of urban and long-distance transit — wear-free, intuitive to use, and virtually indestructible.

The serieSR stop request buttons provide maximum safety and comfort for all passengers — compliant with public transit accessibility requirements.

Thanks to its compact design without visible screws, the unit is protected against tampering and features a hygienic, chemical-resistant surface.

Bright LEDs, customizable symbols, Braille, and an audible signal ensure clear and unmistakable feedback.

The serieSR is designed for flexible installation on poles (Ø 30–35 mm) or walls.

Innovative Design & Technology

The screwless design protects against tampering, while optimized sensor logic prevents false activations (e.g., caused by backpacks or leaning).

Safety & Comfort

Bright LEDs, symbols, and an optional audible signal provide accessible stop request confirmation in compliance with R107.08 and TSI PRM (two-sense principle).

Wear-free

Eliminating moving parts ensures exceptional durability and maintenance-free operation — further supported by CAPTRON's 5-year warranty.
